

## Zaurus mit Linux-Desktop-Anbindung

### Ethernet over USB

Die Anbindung des Zaurus mittels USB over Ethernet wird in einem SuSE Artikel (Supportdatenbank Stichwort Zaurus) erklärt.

Grundsätzliches:

- --nur möglich mit Kernel ab 2.4.19 (ältere erfordern einen Patch)
- --Laden des Treibers: `modprobe usbdnet`
- (<file:/lib/modules/2.4.19-4GB/kernel/drivers/usb/usbdnet.o>)
- --Zaurus über Dockingstation an PC anschließen
- --IP-Adresse angeben: `ifconfig usb0 192.168.10.1 netmask 255.255.255.0 up`

### QtDesktop

Qtdesktop von der Entwickler CD installieren (als root entsprechendes Startscript ausführen)

- --auf dem KDE Desktop eine Verknüpfung herstellen

```
kdesu -n '/opt/ZaurusCD/zcd_qtopiadesktop'
```

(Anmerkung: bei mir funktioniert Qtdesktop leider nur dann, wenn ich es als root starte

- --in den „Settings“ des Qtdesktop (Menü File) IP-Adresse des Zaurus einstellen, z.B.  
192.168.10.99

### Programme installieren

Einige Links zu Internetseiten, die ipk – Pakete anbieten:

<http://www.crosswire.org/feeds/arm/zaurus/>

<http://opie.handhelds.org/feed/zaurus/>

<http://humphrey.applitec.com/zaurus/feed/>

<http://rio.vg/zaurus/files/ipks/>

<http://zaurus-ja.sourceforge.jp/feed/>

**Anmerkung:** zuerst würde ich aus Administrationsgründen

`servermanager.ipk` (telnet auf dem Zaurus aktivieren)

`terminal.ipk`

`filemanager.ipk` installieren.

Zusätzlich sollte man

`troll_ftpd.ipk` installieren, damit der Datentransfer vom PC aus gesteuert werden kann.

Damit dies gelingt, muss nach der installation des `ftpd.ipk` auf dem Zaurus

`/etc/inetd.conf` angepasst werden !!

### #Ausschnitt aus der /etc/inetd.conf

```
ftp      stream  tcp      nowait  root    /usr/sbin/ftpd
telnet   stream  tcp      nowait  root    /usr/sbin/in.telnetd
```

## Adressbuch aus EVOLUTION zum Zaurus exportieren

Das Adressbuch für Evolution befindet sich unter

~/evolution/local/Contacts/adressbook.db

Das Adressbuch des Standardusers root befindet sich auf dem Zaurus unter

/home/root/Applications/adressbook/addressbook.xml

### Vorgehensweise:

- Umwandlung des Evolution-Adressbuches in ein Zaurus-Adressbuch (adressbook.xml) mittels Perl-Script (s. u.)
- kopieren des konvertierten Adressbuches vom PC zum Zaurus
- !!!!! Softreset des Zaurus !!!! (Batteriefach entriegeln und nach kurzer Wartezeit wieder verriegeln) Dieser Schritt ist wichtig, da sonst das neue Adressbuch durch das „alte“ im ROM des Zaurus befindliche überschrieben wird !!!!!

## Das PERL-Script :

### Anmerkung:

Auf dem PC müssen die im Abschnitt „use“ eingetragenen Perl-Module installiert sein !!!  
Erstellen Sie zusätzlich ein Verzeichnis ~/zaurus da das Perl-Script hier das neue addrbook.xml speichert.

```
#!/usr/bin/perl -w
#
# Evolution Addressbook 2 Zaurus
#

use strict;
use CGI qw( unescapeHTML );
use Data::Dumper qw( DumperX ); # for debugging
use DB_File;
use File::Copy;
use XML::Simple;
